

Internal Medicine Residency

Peter Recupero, DO
Program Director

Montgomery Regional Hospital was proud to launch the osteopathic Internal Medicine Residency Program on July 1, 2008. The hospital has a strong team of hospitalists and other physicians who serve as attending physicians and provide outstanding educational opportunities in a small-group environment. Montgomery Regional prides itself on high quality, cost effective patient care delivered with compassion and a focus on customer service. Internal Medicine residents at MRH will be able to spend time one-on-one with attending physicians and will have the opportunity to mentor third and fourth year osteopathic medical students. The Internal Medicine program is well-rounded with didactic sessions, group review, and significant procedure and patient interactions. Please search our site to learn more about the GME opportunities at MRH. Blacksburg, Virginia is a beautiful place to live, and MRH is an outstanding place to train.
