

Residency and Internship Programs

DME Statement

Exemplary training is achieved at Montgomery Regional Hospital as a result of talented faculty who are committed to teaching in a small group environment. Our residents have the opportunity to learn from well-trained and experienced staff. Many of our teaching faculty have additional training in fellowships such as interventional radiology and cardiology, sports medicine, joint replacement, spinal surgery, geriatrics, palliative care, faculty development and research.

We add depth and value to our GME program through our affiliation with two local medical centers, VCOM and two major universities. Furthermore, we have integrated behavioral science training into all of our residency programs giving our residents critical relationship skills and a better understanding of the role of human behavior in the practice of medicine.

At MRH, we are committed to providing state-of-the-art training and developing the person behind the physician. I encourage you to search our site and learn about the unique training experience we are providing at MRH.

"The practice of medicine is an art, not a trade, a calling, not a business: a calling in which your heart will be exercised equally with your head."

~Sir William Osler (1849-1919) Terry Golden D.O., FAAFP, DME
